
🌩️ Amazon Aurora Serverless – Overview

🧠 What is Aurora Serverless?

🔹 **Amazon Aurora Serverless** is an **on-demand, auto-scaling** configuration for Amazon Aurora (a MySQL/PostgreSQL-compatible RDBMS).

- ⚙️ **Database capacity scales up/down** automatically
- 💸 **You pay per second** of usage
- 💤 Automatically **pauses during inactivity** to save cost
- ☁️ Ideal for **infrequent, unpredictable, or spiky workloads**

✅ Use Cases

Use Case	Why Aurora Serverless?
🧪 Dev/Test Environments	Low cost during idle time
📊 Analytics Dashboards	Spiky access patterns
🛒 E-commerce Flash Sales	Auto scales during heavy load
🧘 SaaS Multi-Tenant Apps	Per-tenant isolated workloads

🆚 Aurora Serverless v1 vs v2

Let's break it down across key areas:

Feature 🔍	Aurora Serverless v1 🌩️	Aurora Serverless v2 ⚡
✅ Launch Date	2018	2022
⬆️ Scaling Granularity	ACUs (in 2x steps: 2, 4, 8...)	Fractional ACUs (0.5 increments)
📈 Scaling Time	Several seconds to minutes	**Milliseconds to seconds** ⚡
📊 Auto-Scaling Type	Only compute	**Compute & IOPS**
🛑 Pause During Idle	Yes	Optional (can be disabled)
🧠 Multitenancy / Spiky Use	Not efficient	**Ideal** (scales precisely)
🔁 Connection Handling	May drop connections	**No connection drops** during scaling
🔗 Read Replica Support	❌ No	✅ Yes
🌍 Global Databases	❌ Not supported	✅ Supported
🔐 Multi-AZ Support	Limited	✅ Supported
💰 Pricing Flexibility	Less granular billing	**Highly granular** billing per 0.5 ACU
🎯 Compatibility	MySQL 5.6 / PostgreSQL 10	MySQL 5.7+, PostgreSQL 13+

⚡ Aurora Serverless v2 Advantages

✅ **Fast, instant scaling**
✅ **Better performance for production workloads**
✅ **No application interruptions**
✅ **Read Replicas and Global Databases supported**
✅ **Granular cost control with precise scaling**

> 🔥 If you're starting a **new serverless DB** today, v2 is the **recommended version** by AWS.

💵 Pricing Basics

Aurora Serverless is billed per **ACU (Aurora Capacity Unit)** per second:

- v1: Starts at **2 ACUs** minimum
- v2: Starts at **0.5 ACUs** and scales infinitely

You are also billed for:

- **Storage (GB/month)**
- **Backup storage**
- **I/O operations (v2 only)**

🧪 Real-World Lab Idea

> **Lab: Deploy Aurora Serverless v2 with MySQL**

🔹 Create an Aurora Serverless v2 DB cluster
🔹 Set min ACU to 0.5, max to 8

- 🔹 Connect using MySQL client from EC2
- 🔹 Simulate load using a loop script
- 🔹 Observe auto-scaling in **CloudWatch Metrics**

🎓 Summary Table

Criteria	v1	v2
Target Use	Dev/test, low traffic	Production, dynamic apps
Scale type	Coarse (2x steps)	Fine-grained (0.5 ACU)
Read replicas	No	Yes
Scale time	Slow	Fast (seconds)
Min ACU	2	0.5
Multi-AZ	Limited	Fully supported

Would you like a:

- 🧪 Full **hands-on lab guide** to deploy Aurora Serverless v2 from Console and test auto-scaling?
- 📄 Comparison PDF handout for classroom?
- 🔗 Terraform or CloudFormation template?
