
AWS Migration Hub – Complete Guide

What is AWS Migration Hub?

AWS Migration Hub is a **centralized service** that helps you **track, monitor, and orchestrate application migrations** across multiple AWS tools and services like:

- **AWS Application Migration Service (MGN)**
- **AWS Database Migration Service (DMS)**
- **AWS DataSync**
- Third-party tools (e.g., CloudEndure, MigrationWiz)

It provides a **single dashboard** to manage the progress and health of all your **server, database, and application migrations**.

Key Features

Feature	Description
 Single View Dashboard	Monitor migrations across multiple services
 Migration Tracking	Tracks progress by application or server
 Tool Integration	Integrates with AWS MGN, DMS, SCT, etc.
 Inventory Discovery	Discover on-premises servers using agents or imports
 Assessment Reports	Evaluate migration readiness with Migration Hub Strategy Recommendations

Service-Agnostic

Works with third-party tools and hybrid clouds

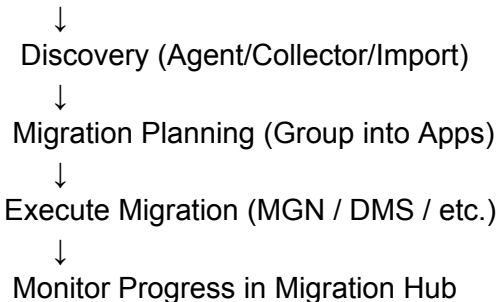

Core Services Inside Migration Hub

1. **Migration Hub Home** – Unified dashboard for all migration activities
 2. **Discovery** – Helps identify what resources you have on-prem
 3. **Refactor Spaces** – Build/refactor microservices during migration
 4. **Strategy Recommendations** – Suggests ideal migration strategies
 5. **Orchestrator** – Automates and sequences migration tasks
-

How AWS Migration Hub Works

[On-Premises Infrastructure]

Common Use Cases

Use Case	Example
Server Migration	Track migration of EC2, VMs using MGN
Database Migration	Coordinate and monitor DMS migrations
Application Grouping	Group servers/databases into applications
Refactoring	Use Refactor Spaces to shift to microservices

Assessment

Use strategy recommendations to plan cloud transitions

Step-by-Step: Using AWS Migration Hub

✓ **Scenario: Migrate a group of on-prem VMs to EC2 using AWS MGN + DMS**

Step 1: Access AWS Migration Hub

- Go to the AWS Console → **Migration Hub**
 - Choose your **Home Region** (can't change later)
-

Step 2: Discover Your Servers

Choose one of the following:

- ♦ **Discovery Agent**
 - Install **AWS Discovery Agent** on each server
 - Reports server info (CPU, memory, network, software)
 - ♦ **Discovery Connector (VMware only)**
 - Deploy into vCenter to discover all VMs
 - ♦ **Manual Import**
 - Upload a CSV file with server inventory
-

Step 3: Group Resources into Applications

- In Migration Hub → **Applications**
 - Group discovered servers into logical applications (e.g., Payroll App)
 - Helps track migration progress by business workload
-

Step 4: Use Strategy Recommendations (Optional)

- Run **AWS Migration Hub Strategy Recommendations**:
 - Analyzes workloads
 - Suggests strategies: **Rehost, Refactor, Replatform, etc.**
-

Step 5: Migrate with AWS MGN or DMS

- ♦ For servers (rehost):
 - Launch **AWS Application Migration Service (MGN)**
 - MGN replicates servers into EC2
 - You can **monitor this in Migration Hub**
 - ♦ For databases:
 - Use **AWS DMS** to migrate databases
 - Link it to the server/application in Migration Hub
-

Step 6: Track Migration Progress

- Go back to **Migration Hub** → **Applications**

- View each application's:
 - **Migration status**
 - **Number of servers migrated**
 - **Error logs**
 - **Service-specific progress** (MGN, DMS)
-

Step 7: Post-Migration Cleanup

- Validate that applications work
 - Update DNS and decommission on-prem systems
 - Remove temporary roles/agents
-

Pricing

- **AWS Migration Hub itself is free**
- You pay for:
 - The underlying services (MGN, DMS, EC2, S3, etc.)
 - Optional: Refactor Spaces or assessments depending on region

 [AWS Pricing Info](#)

AWS Migration Hub vs Other Tools

Tool	Use For
AWS Migration Hub	Central tracking of all migrations

AWS MGN	Rehost ("lift-and-shift") VMs to EC2
AWS DMS	Database migration
AWS SCT	Schema conversion for heterogeneous DB migration
AWS DataSync	File-based migrations (NFS/SMB to S3, etc.)

Notes for Exam/Interview

- Migration Hub is **multi-service, multi-tool**
 - Used to **track and manage**, not execute migrations
 - Discovery uses:
 - **Agent** (for details)
 - **Connector** (for VMware)
 - **Import** (CSV)
 - Integrates with **MGN, DMS**, and more
 - Choose a **home region**—this is **permanent**
 - Offers **Strategy Recommendations** and **Refactor Spaces**
-
